GOJE EMMANUEL

Chemical Engineering Student & Full-Stack Developer

📧 emmanuelgoje389@gmail.com 📱 +234 906 148 9169 🌐 goje01.github.io/Goje-s-Nexus/

PROFESSIONAL SUMMARY

An innovative Chemical Engineering student at Modibbo Adama University with a powerful secondary focus as a self-taught Full-Stack Developer. Adept at engineering logical algorithms, building scalable web applications, and implementing smart digital solutions. Highly analytical, detail-oriented, and uniquely positioned to bridge the gap between heavy industrial engineering concepts and modern tech solutions.

EDUCATION

Modibbo Adama University, Yola *Expected Graduation: 2027*

Bachelor of Engineering (B.Eng.) — Chemical Engineering

- Core coursework: Chemical Engineering Thermodynamics, Transport Phenomena, Process Optimization, Sieve Analysis, and Fluid Dynamics.
- Actively engineering practical computations to solve processing and material balance workflows.

TECHNICAL PROJECTS

Nooroo — Personal AI Assistant *2025*

Developed an advanced productivity voice assistant built to streamline daily task logging, automate intelligent notifications, and optimize personal scheduling through a customized speech interpretation interface.

Python | Natural Language Processing | AI/ML | Speech Recognition

Flight Finder Nigeria *2025*

Engineered a complete local flight search aggregation and transaction portal specifically tailored to the Nigerian domestic aviation sector. Features high-performance search filtering, responsive user interface states, and direct third-party transactional integration.

JavaScript | React | Node.js | API Integration | Payment Gateways

CORE COMPETENCIES & SKILLS

Languages: Python | JavaScript | HTML5 | CSS3

Frameworks/ Tools: Flask | React | Node.js | Git / GitHub Pages

Domain Expertise: Chemical Engineering Foundations | AI/ML Implementation | RESTful APIs | Responsive Web Design

ACADEMIC & PROJECT ARTIFACTS

- **Process Modeling Reports:** Developed rigorous practical lab analyses assessing structural pressure drops in pipe networks, thermodynamic equilibrium states, and sifting calculations.
- **Digital Interface Architecture:** Successfully deployed digital presence portfolio systems utilizing micro-animations, structured CSS transitions, and client-side background dynamic adjustments.
